##### VD0\_OUT0

Boot Media Select

0: NAND flash

1: Reserved

##### VD0\_OUT[3:1]

Clock: iDSP / vDSP / DRAM

000: 126 / 108 / 300 MHz

001: 120 / 96 / 300 MHz

010: 108 / 108 / 240 MHz

011: 96 / 96 / 192 MHz

100: 117 / 108 / 300 MHz

101: 117 / 96 / 300 MHz

110: 117 / 108 / 240 MHz

111: 96 / 96 / 192 MHz

##### VD0\_OUT4

PLL\_UNLOCK\_TRIG\_RESET

0: disable generating GRST when core PLL out of lock (default)

1: enable generating GRST when core PLL out of lock

##### VD0\_OUT5

NAND Flash Page Size

0: 512 Bytes

1: 2K Bytes

##### VD0\_OUT6

NAND Read Confirm

0: No "Read Confirm" needed

1: Requires "Read Confirm"

##### VD0\_OUT7

Select ENET

0: disable

1: enable

##### VD0\_OUT8

Boot Bypass

0: disable (no boot bypass)

1: enable

##### VD0\_OUT9

Flash Fast Boot Mode

0: disable

1: enable

##### VD0\_OUT10

IO Flash BOOT

0: USB

1: Flash

##### VD0\_OUT11

Reserved

Set to 0

##### VD0\_OUT12

EMA Select

Set to 0

##### VD0\_OUT13

ARM Sync Lock Mode

0: disable

1: enable

##### VD0\_OUT14

ARM Mode Change Issue Reset

0: GRST\_L not issued when switching between ARM sync/async modes

1: GRST\_L issued when switching between ARM sync/async modes

##### VD0\_OUT15

RMII Select

Set to 0

#### A5S Power-On-Config Setting

##### A5S Power-On-Config (VD1\_OUT0~15)

##### VD1\_OUT0

SPI Boot

0: USB / Flash

1: SPI

##### VD1\_OUT1

HIF Enable

0: disable

1: enable host interface

##### VD0\_OUT2

Reserved

Set to 0

##### VD1\_OUT3

HIF Type

0: Intel

1: Motorola

##### VD1\_OUT4

RDY Polarity

0: HIF\_RDY active low

1: HIF\_RDY active high

##### VD1\_OUT5

HIF Secure Mode

0: normal

1: secure mode

##### VD1\_OUT6

Reserved

Set to 0

##### VD1\_OUT7

USB Clock Source Select

0: choose internal clock for USBPHY

1: choose external clock for USBPHY

##### VD1\_OUT[9:8]

Reserved

Set to 0

##### VD1\_OUT[10]

REF\_CLK for USB

Set to 1

##### VD1\_OUT[11]

Reserved

Set to 0

##### VD1\_OUT[12]

Reserved

Set to 0

##### VD1\_OUT[14:13]

SYS\_CONFIG

00: use power-on-config set on external pins

01: select pre-set option 1

10: select pre-set option 2

11: illegal

##### VD1\_OUT[15]

Config Source Select

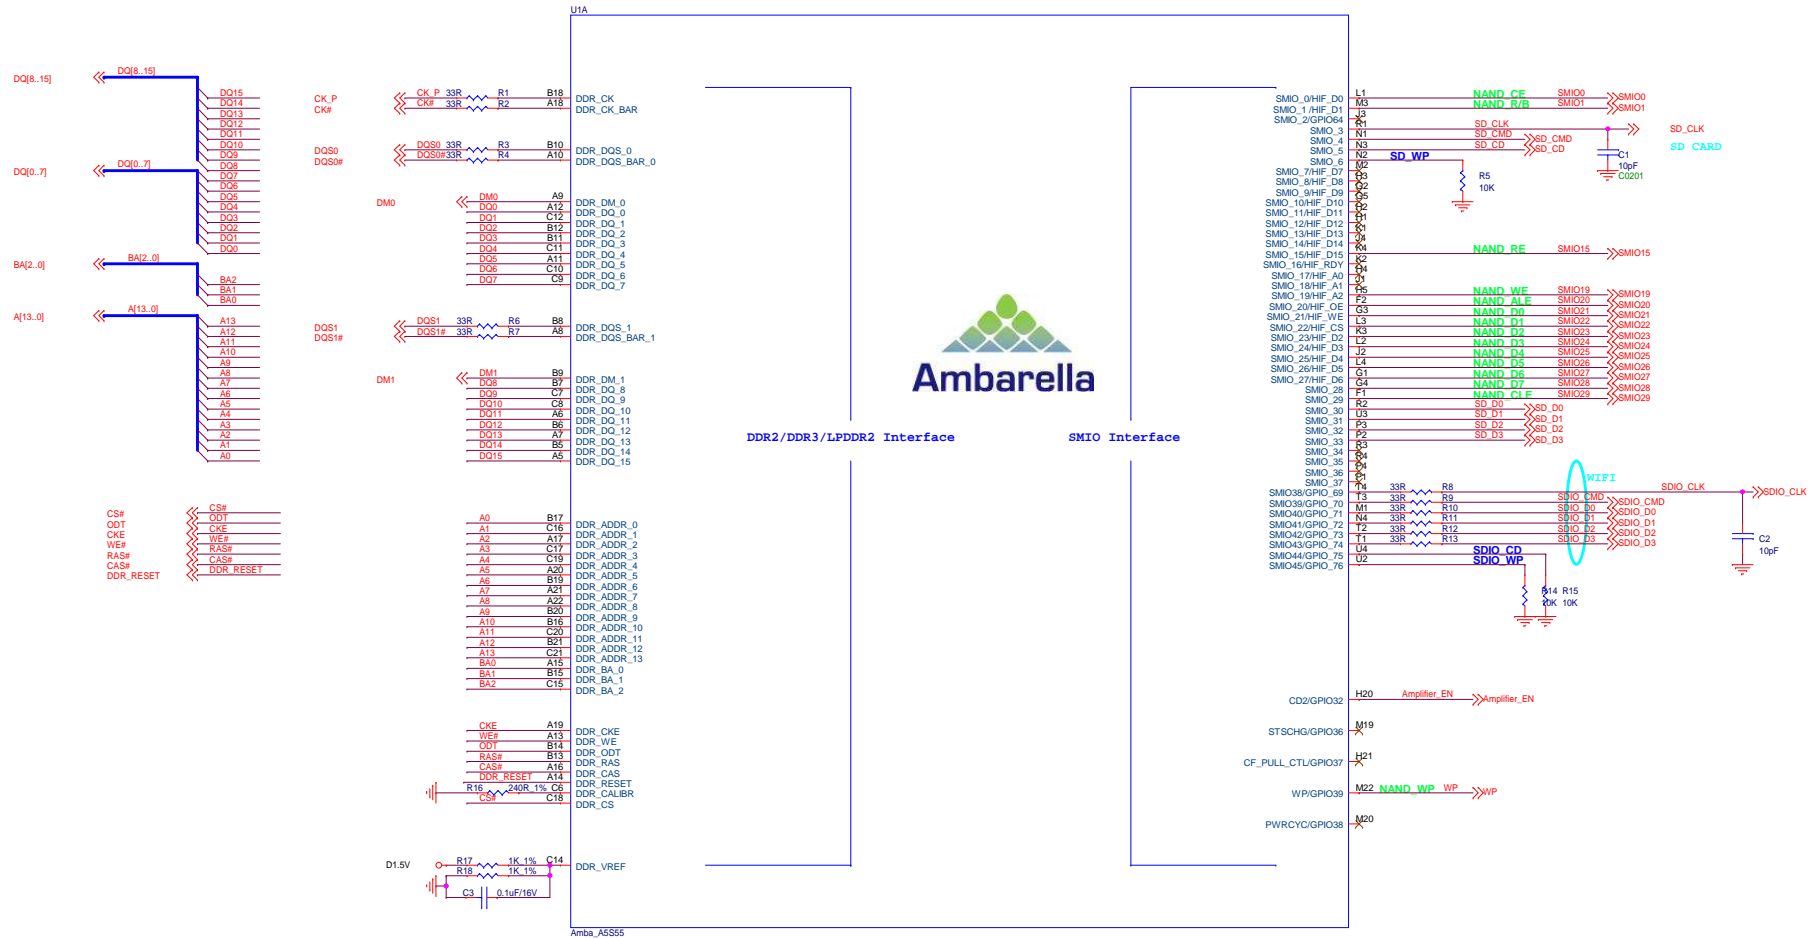

0: depends on that configured by VD1\_OUT[14:13]

1: on-chip EEPROM (Efuse)

#### Note:

all GPIO pins(89 Pins) are in Hi-Z state during reset assertion and are initialized to be inputs.

#### System GPIO Table

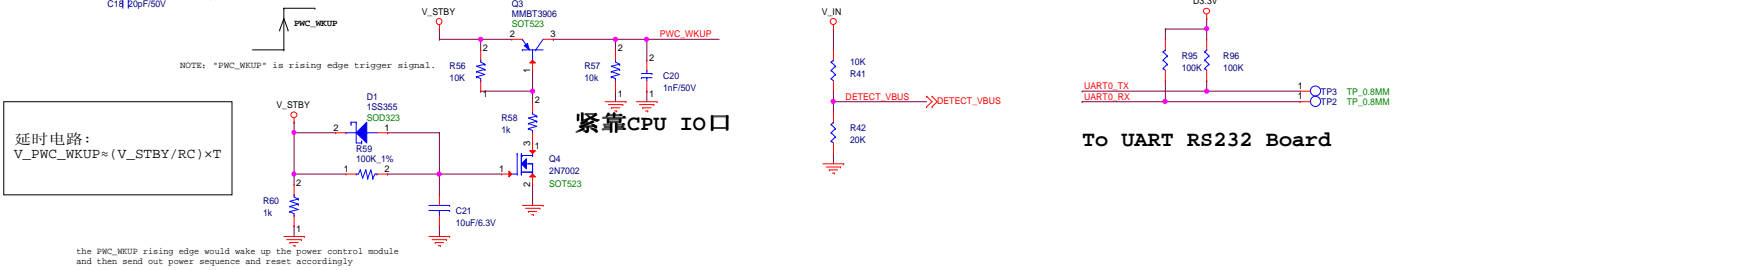

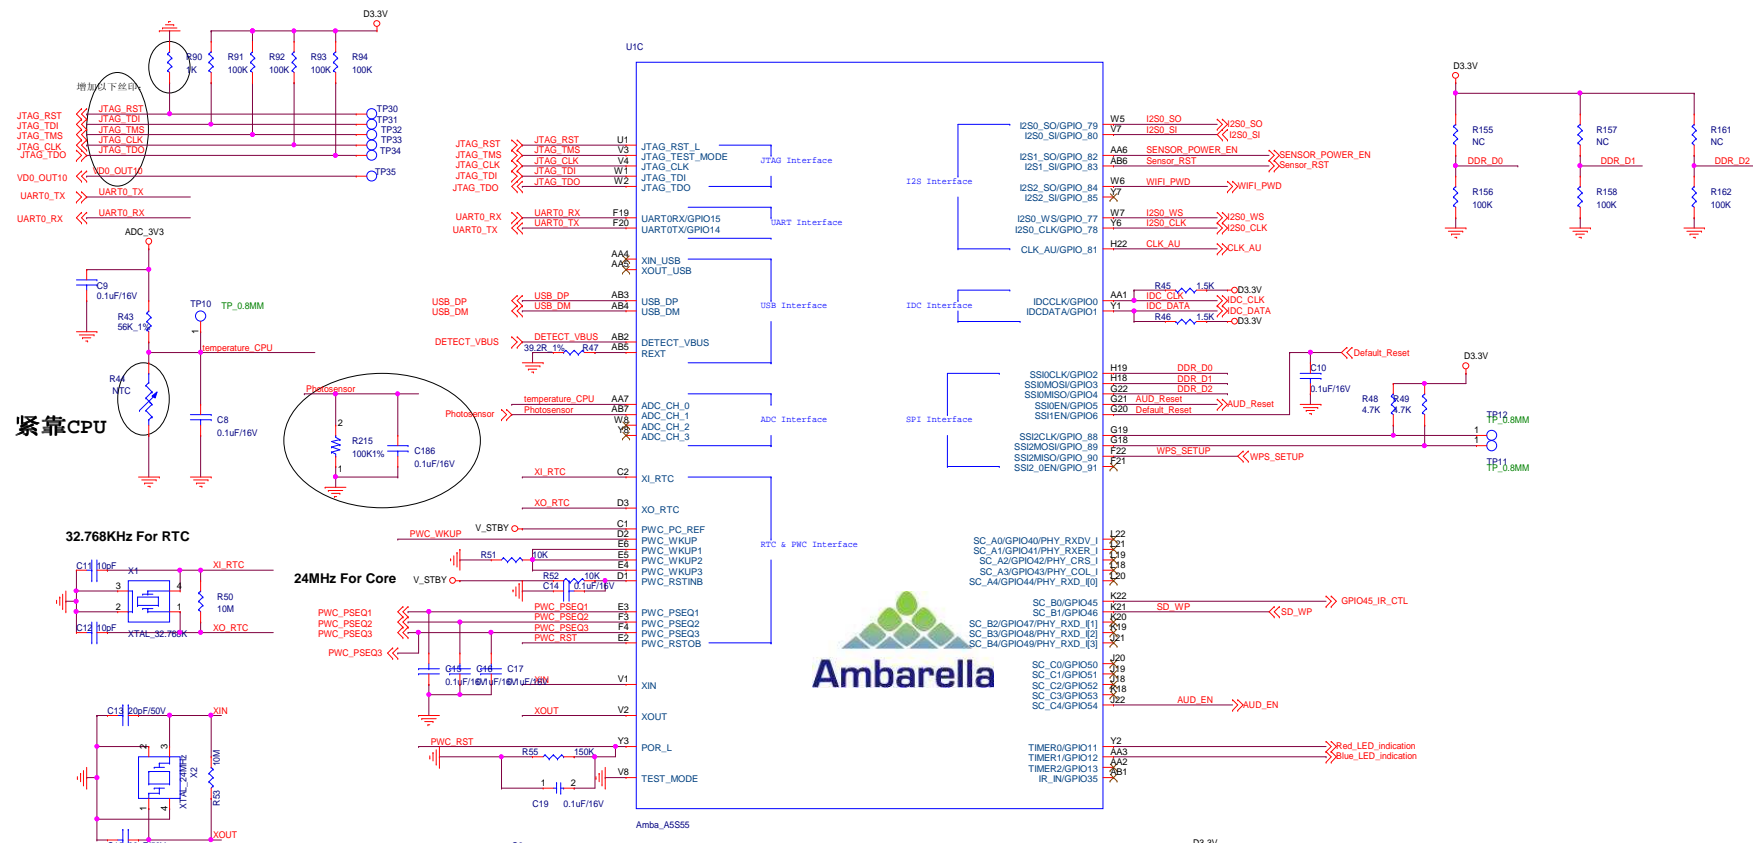

### 靠近SENSOR连接座LAYOUT

USB BOOT MODE

NOTE: "PWC\_WKUP" is rising edge trigger signal.

延时电路:  
 $V\_PWC\_WKUP \approx (V\_STBY / RC) \times T$

the PWC\_WKUP rising edge would wake up the power control module and then send out power sequence and reset accordingly

1. "POWER\_OFF\_DET" set by software---used to trigger the power down sequence;  
 2. "PWC\_WKUP" set by hardware---used to trigger the power on sequence;

NOTE:  
 HL1、H2L、H3L为螺丝孔位，用于固定散热片！
